

FILL NPK 31-11-11

SUPPORTS THE CROP DURING VEGETATIVE GROWTH STAGES

The FILL line is a range of soluble powder products for foliar applications. The FILL LINE products are characterized by excellent solubility and include ternary (NPK) fertilisers with various combinations of nutrients to meet the needs of all crops in all phenological phases.

FILL NPK 31-11-11 is a fertilizer of the FILL LINE whose ratio between nitrogen, phosphorus and potassium (3:1:1) makes it ideal for treatments on all herbaceous crops at the first vegetative phases and at the cycle restart in fruit-bearing plants.
